

Momentum Medical Massage Therapy

VA Client Intake and Treatment Structure

Welcome to Momentum Medical Massage Therapy.

Your first visit is a clinical session designed to assess your condition within the scope of your VA referral and authorized plan of care.

Initial Clinical Assessment and Treatment Session

During your first appointment, your body structure, movement patterns, and nervous system response will be evaluated. The goal is to identify key areas contributing to your condition and begin appropriate therapeutic intervention based on your authorization.

This session is structured to establish a clinical baseline and initiate treatment within VA guidelines.

What to Expect During Your First Visit

Today is your initial session. Your body will be assessed and the most critical areas will be addressed within the authorized scope of care. Future sessions will follow a structured treatment plan.

After Your First Session

Following your initial visit, a treatment approach will be established based on your response to care. Ongoing sessions are designed to build progress over time and are not intended as a one-time treatment.

Scheduling and Treatment Policy

All services for VA patients are provided in accordance with VA authorization guidelines. Treatment is performed only within the approved scope and duration. Scheduling is coordinated based on authorization and clinic availability. No services are provided beyond the authorized treatment plan.

From your next visit, sessions will follow the approved structure and time allocation.

Important Notice

All patients are expected to follow clinic preparation guidelines prior to their appointment. Momentum Medical Massage Therapy operates as a clinical practice focused on treatment outcomes and compliance with VA standards.

This structure ensures consistency, safety, and continuity of care.
